

Policy Innovation for a New World Order

Long-held economic and political certainties are eroding and the shape of the emerging world order is still vague. This Forum brings together articles that imagine a new world order, one that looks different from the current system shaped by decades of belief in free markets and globalisation. What might a forward-looking industrial policy look like – one that does not just react to crises? What kind of climate policy truly brings people on board? How could globalisation be more inclusive and avoid trade wars or the abuse of power by tech giants? The contributors to this Forum, who took part in the Forum New Economy's 2025 Berlin Summit, continue the dialogue on how to win back the future.

Towards the Next World Order – Lessons from History

Adam Tooze, Columbia University, New York, USA.

Beyond Trade Wars and Economic Nationalism – Towards a Cooperative Global Governance

David Kläffling, Forum New Economy, Berlin, Germany.

Thomas Fricke, Forum New Economy, Berlin, Germany.

A Migration Bargain

Ian Goldin, Oxford University, United Kingdom.

It Should Be About the Economy – Are Voters Stupid?

Robert Gold, Kiel Institute for the World Economy, Germany.

Beyond the Fixation on Carbon Pricing: A New Framework for Designing Climate Policy

Isabella Wedl, Forum New Economy, Berlin, Germany; Institute for European Environmental Policy, Brussels, Belgium.

Eric Lonergan, Calibrate Partners, London, UK.
