

sEV-Enriched Serum Preparations From Healthy Individuals Protect Against Acute Pancreatitis-Induced Intestinal Barrier Dysfunction Through miR-579-3p/ANXA3-Mediated Inhibition of NLRP3 Inflammasome Pyroptosis (DOI: 10.2478/aite-2026-0018)

In the original published manuscript, an error existed in the right panel of Figure 1B.

- Error description: The image displayed in the right panel of Figure 1B was mistakenly used, rather than the result belonging to the present study. This mistake arose from incorrect file replacement during the figure assembly process at manuscript preparation.
- Correction made: The right panel of Figure 1B has been fully replaced with the correct image generated from the research of this study.
- Critical note: This figure correction only fixes an inadvertent image assembly mistake. It has no impact on all raw experimental data, quantitative analyses, statistical results, discussion interpretations, and all core scientific conclusions of the manuscript. All findings and main conclusions of this work remain entirely intact and valid.
