

Geopolitics, Big Tech and the Future of European Security

In just a few short months, the new government administration in the United States has thrown the world order into disarray. A potential global trade war, new global value chain configurations and shifting security alliances are reshaping geopolitics. Given the current uncertainty, access to developing technologies will be decisive, and technological sovereignty is more important for the European Union than ever before. How can the EU get up-to-speed? What steps can Europe take to ensure its technological sovereignty? How should it go about relations with China and the new Trump Administration with regards to its tech policy? What role does Big Tech play in European security?

Coopetitive Technological Sovereignty: A Strategy to Reconcile International Collaboration with Knowledge and Economic Security
