

Reply to “A note on the orientation and size of noctilucent cloud particles”

By CRAIG F. BOHREN, *Department of Meteorology, College of Earth and Mineral Sciences, Pennsylvania State University, 503 Walker Bldg., University Park, Pennsylvania 16802, U.S.A.*

(Manuscript received May 5, 1982)

I am pleased that Dr. Gadsden has reversed his previous position and now agrees with me that noctilucent cloud particles are randomly oriented rather than aligned. This in turn implies that one must look elsewhere for an explanation of his circular polarization measurements.
