Dry deposition of particles

Implications and recommendations for mapping of deposition over Europe

(Manuscript received 15 July 1996)

In the article “Dry deposition of particles: Implications and recommendations for mapping of deposition over Europe” (*Tellus* **47B**, 587–601), a reference has been omitted in the caption to Fig. 1. “The figure caption should read: Concentration field of NH_4^+ over Europe as calculated by the TREND model (Asman and Van

Jaarsveld, 1991). Temporal variations in monthly mean SO_4^{2-} concentrations of 3 European regions according to monitoring results of EMEP based on an analysis by Leck and Rodhe (1989). The map in the bottom panel identifies the EMEP-stations in these regions as defined by Leck and Rodhe (1989).”

In Fig. 2, the reference to Janssen et al. (1991) is wrong. The correct reference is Janssen et al. (1989).
