

EDITORIAL

The Journal of Agriculture and Value Addition (JAVA) is a peer-reviewed open-access scholarly journal published by the Faculty of Animal Science and Export Agriculture at Uva Wellassa University of Sri Lanka. This journal is devoted exclusively to the publication of high-quality fundamental and applied research related to all aspects of agriculture, life sciences, and value addition thereof. The journal aims to serve as an informative platform, exploring and disseminating knowledge in the fields of Crop Production Technology, Food Science and Technology, Animal Production and Technology, Aquatic Sciences, Environmental Science and Climate Change, Agricultural Microbiology and Biotechnology, Agricultural Engineering and Process Technology, Agricultural Economics, Agribusiness Management, Extension and Entrepreneurship.

The core objectives of JAVA are (i) to emphasize research that advances value addition in agriculture and fisheries, (ii) to provide readers insights into the future potential of these sectors, and (iii) to channel research findings towards economic development. JAVA publishes a variety of content, including original research papers, short communications, review articles, invited reviews, case studies, book reviews, opinions, and commentaries, all focusing on value addition in agriculture and fisheries. It seeks to share research that transcends traditional agriculture and fisheries practices, targeting individuals who contribute to the economic advancement of these fields. Additionally, the journal endeavors to encourage collaborations across sectors, integrating agriculture, fisheries, and other applied domains. A special feature of JAVA will be its inclusion of invited review articles authored by leading researchers in related disciplines. These reviews will offer foundational insights into each subfield, addressing pressing challenges, current issues, and emerging opportunities in value addition for agricultural and fisheries resources. The journal invites contributions that comprehensively explore the value addition across all stages of production, processing, and marketing within the value chain.
