MBBS, PgDip Ven, MD, MSLCoSHH

Secretary

Dr Wasanthi Hemamala
MBBS, PgDip Ven, MD

Sri Lanka College of Sexual Health and HIV Medicine (CoSHH) proudly publishes the volume 7; October 2025 issue of the Sri Lanka Journal of Sexual Health and HIV Medicine (Sri Lanka JoSHH) in both electronic and print media.

Editorial

Sri Lanka College of Sexual Health and HIV Medicine (CoSHH) welcome you to the latest volume of the Sri Lanka Journal of Sexual Health and HIV Medicine (Sri Lanka JoSHH). It is with great satisfaction that we continue the publication of Sri Lanka JoSHH in 2025 following a period of temporary pause. The journal remains committed to providing a platform for high quality research on HIV/STI, sexual health and preventive science with particular relevance to Sri Lanka.

Sexual health and HIV/STI related medical science has reached many important milestones during past few years which can ensure remarkable differences in the lives of people living with HIV(PLHIV) as well as people who are most at risk for HIV. Even though the miraculous effects of latest HIV treatment and biomedical interventions for preexposure and post exposure prophylaxis are well proven by research, there are continuing lacunae between research and practice specially in the developing world.

The leading article in this volume of Sri Lanka JoSHH titled "Let science reach all"; the presidential address at the inaugural session of the Sri Lanka College of Sexual Health and HIV Medicine, 2024, highlights this gap and discusses the multiple challenges in practicing evidence-based medicine (EBM) in real world and the way forward.

In this volume we are pleased to present a diverse collection of articles covering multiple aspects of HIV and sexual health. The submissions reflect rigorous research, innovative approaches, and critical analysis addressing both clinical and public health perspectives.

Through its continued publication, we reaffirm our role in advancing scholarship that informs clinical care, strengthens public health, and warmly invite contributions that reflect scientific rigor, relevance and innovation in the field.

We look forward to the sustained involvement of our authors, readers and reviewers in strengthening our journal and to ensuring that the science of sexual health and HIV medicine translate into better outcomes for individuals and communities.

Dr Manjula Rajapakshe, MBBS, PgDip Ven, MD
